

OneSpan Sign API & SDKS

Simple, powerful REST API and SDKs for adding e-signing capabilities to your website, mobile app and core systems.

HIGHLIGHTS

Web services support:

- REST, JSON

Sample code available:

- Java, C#, PHP, APEX, iOS, Android

Document formats:

- Microsoft® Word® (DOC, DOCX)
- Adobe® Acrobat (PDF)
- Open Document Text (ODT)

Signing methods:

- Click-to-sign
- Click-to-initial
- Capture handwritten signature
- Mobile signature capture

Identity proofing:

- Username and password
- SMS text code
- Q&A
- ID Verification
- Personal digital certificates (i.e., stored on smart cards)
- Third-party ID check (e.g., Equifax)
- Set up SAML/OAuth to enable users to log into OneSpan Sign using single sign-on (SSO)

The integration of e-signatures into your applications should be a quick process. With OneSpan Sign, you can keep your document processes digital with electronic signatures and enable your users to transact with you – anywhere, anytime and on any device. Integrate our trusted e-signature API and SDKs to sign documents in as little as 30 minutes.

OneSpan Sign allows you to:

- Create and manage document packages
- Control who signs and in what order
- Manage and authenticate users
- Automate workflows and capture forms data
- Monitor and report on the progress of transactions
- Store and archive e-signed documents and audit trails

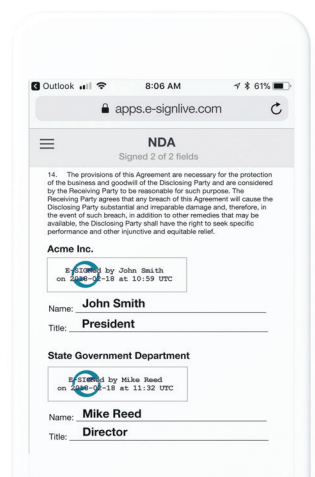

“Tons of sample code in various languages and excellent product documentation allowed us to learn and implement quickly.”

Join the Community Portal

You'll find everything you need to understand the basics of integrating e-signatures in the OneSpan Community Portal. Get a free, unlimited sandbox account and access to online resources to help you integrate even faster.

Integration Made Easy

The process is simple. The document to be signed originates in your application. Next, it is sent to OneSpan Sign where recipients, signature locations, and other workflow and user authentication properties are defined. The document is then distributed to all recipients to view and sign. After signing is complete, the e-signed document and audit trail can be downloaded and processed by your application.

6 Reasons Why Developers Choose Onespan Sign

Easy to Integrate

We offer a developer-friendly open API that's easy to use. What's more, our fully supported SDKs – including mobile SDKs for iOS and Android – provide the building blocks to get you up and running even faster.

White-labeled Experience

Customize the interface to match your company's branded website and apps so customers never realize they are leaving your site to e-sign documents.

Third-party Data Fields

Tightly integrate with and link your data fields to/from other apps and systems. Data moves bidirectionally — from the third party system to your document and vice versa.

Flexible Deployment Options

Deploy OneSpan Sign on-premises, or on a private or public cloud in data centers around the world. Our platform meets the most stringent security and compliance requirements, including SOC 2, GDPR, FedRAMP and HIPAA.

Enterprise-ready

Designed for the modern enterprise tech stack, OneSpan Sign's "code once, deploy anywhere" architecture enables you to easily scale as your e-signature needs grow.

Self-serve API Support

Our online developer community includes forums, tutorials, sample code and tools to support you every step of the way.

About OneSpan

OneSpan, the digital agreements security company™, helps organizations accelerate digital transformations by enabling secure, compliant, and refreshingly easy customer agreements and transaction experiences. Organizations requiring high assurance security, including the integrity of end-users and the fidelity of transaction records behind every agreement, choose OneSpan to simplify and secure business processes with their partners and customers. Trusted by global blue-chip enterprises, including more than 60% of the world's largest 100 banks, OneSpan processes millions of digital agreements and billions of transactions in 100+ countries annually.
